Europe Rehoused was one of the most influential housing texts of the 1930s, and is still widely cited. Written by the housing consultant Elizabeth Denby (1894-1965) it offered a survey of the nearly two decades of social housing built across Europe since the end of World War One, with the aim of informing British policy makers; as a reviewer declared 'it has a decidedly propagandist flavour'. Denby was a leading figure in housing debates in the 1930s. Adopting a line in sharp critique of what she saw as the entirely materialist approach of state housing policy, Denby advocated the incorporation of social amenities alongside well-designed and equipped

flats and houses, ideally sited within urban areas; by the late 1930s she was a pioneering advocate of the concept of mixed development. Europe Rehoused is divided into two parts. The first considered the origins of the housing problem of the inter-war decades, which Denby dated to the onset of the Industrial Revolution. She then examined the various national factors which influenced the problem: climate, post-war economy and the nature of land ownership. Finally she discussed the financial aspect: the bodies responsible for house building and the nature of the subsidies available for building. This was very much a schematic survey and the second, and largest, part of the book was devoted

to individual studies of European practice, and discussed 'two winners in the War, two losers and two neutrals': Sweden, Holland, Germany, Vienna, Italy and France. This section was completed with a concluding chapter in which she compared continental work with the British system, and the lessons that could be learnt in this country from abroad. Although Denby's book was not the only one of its sort, its importance lies in its polemical nature and its advocacy of a rehousing policy which would become widely adopted after WWII. Significant too, is that the book is the voice of a woman who had assumed a significant status as a housing expert in the inter-war decades; Walter Gropius, who

wrote the introduction to the US edition of the book observed that the book 'carried the weight of perfect expertness.' Such voices have for too long been overlooked, yet Denby was formed part of a very strong tradition of women reformers who worked to re-shape the inter-war and post-war British built environment.

A motorcycle's electrical system can be daunting to even the most adept home mechanic. And yet, the more complex these systems become—and the more important to a motorcycle's function—the more useful, even critical, it will be to know something about them. That's where this book comes in with a user-friendly guide to understanding, diagnosing, and fixing the electrical systems and components that make a bike run . . . or falter. Veteran technician Tracy Martin explains the principles behind motorcycle electrical systems and how they work. He details the various tools, such as multimeters and test lights, that can be used to evaluate and troubleshoot any vehicle's electrical problem. And in several hands-on projects, he takes readers on a guided tour of their vehicle's electrical system, along the way giving clear, step-by-step instructions for diagnos-

ing specific problems.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conven-

tions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his pro-

fession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.
