Together, the words technology and assessment have different meaning for different people. Those who work with educational or instructional technology take these words to mean assessing the impacts of technology on teaching and learning. Test developers and psychometricians, however, consider ways in which computer-based technologies can be used to enhance current approaches to student assessment. This book examines technology and assessment from both perspectives by examining past, current and promising methodologies and applications in both fields. The influences instructional uses of technology and the increasing reliance on testing to gauge student and school performance have on one another are also explored. The book concludes by describing an organizational structure that could bring instructional applications of technology and assessment practices into closer alignment.

This powerful, unsettling book gives us a rare glimpse behind the closed doors of global financial institutions by the winner of the 2001 Nobel Prize in Economics. When it was first published, this national bestseller quickly became a touchstone in the globalization debate. Renowned economist and Nobel Prize winner Joseph E. Stiglitz had a ringside seat for most of the major economic events of the last decade, including stints as chairman of the Council of Economic Advisers and chief economist at the World Bank. Particularly concerned with the plight of the developing nations, he became increasingly disillusioned as he saw the International Monetary Fund and other major institutions put the interests of Wall Street and the financial community ahead of the poorer nations. Those seeking to understand why globalization has engendered the hostility of protesters in Seattle and Genoa will find the reasons here. While this book includes no simple formula on how to make globalization work, Stiglitz provides a reform agenda that will provoke debate for years to come. Rarely do we get such an insider's analysis of the major institutions of globalization as in this penetrating book. With a new foreword for this paperback edition.

My second life began when I was kidnapped by two complete strangers . . . That the kidnapers are actually Aunt Sandy and Uncle Max makes no difference to thirteen-year-old Domenica Santolina Doone, better known as Dinnie--she just doesn't want to go. Dinnie's accustomed to change, with her family constantly moving for "opportunity"--but when her aunt and uncle whisk her far away to an international school in Switzerland, she's not sure

she's ready to face this "opportunity" alone. All at once she finds herself in a foreign country, surrounded by kids from different cultures speaking all sorts of languages and sharing various beliefs. Home and her first life seem so far away. But new friendships and the awesome beauty of Switzerland begin to unlock thoughts and dreams within her. Her joys and struggles make up a rich tapestry of experiences she can find nowhere else. Switzerland begins to be more than a temporary home--it becomes a part of Dinnie herself, the self she never knew she could be. Switzerland is the picturesque backdrop of Newbery Medal winner Sharon Creech's new novel about a young girl discovering the beauty of nature, her place in the world, the value of friendship--and that life is full of wonderful "bloomabilites."

High stakes tests have become the centerpiece of new educational reform movements within the United States. The No Child Left Behind Act of 2002 has mandated a renewed emphasis on testing. Prior to its enactment, New York State had changed the graduation requirements for schools throughout the state, raising the standards in 1996 for a high school diploma by requiring all students to take and pass a minimum number of Regents exams. This project studies the effect of these new laws and standards on teachers in New York City and how they cope with pressures that are placed on them by students, parents, administrators, and other teachers. One concept this study builds upon is test score pollution, which is used in the education literature; however, it is not fully developed in the sociology of education literature. Test score pollution focuses on teachers and administrators rather than students and is used to describe factors that affect the validity of test scores. Some test score pollution strategies include: "teaching to the test," dismissing low-achieving students on test day, and teachers altering response sheets or their interpretation of a response while scoring. It is alleged that these strategies are all used in order to improve the passing percentage of schools on regents exams. In New York high schools, teachers are the individuals in charge of grading their own students' high stakes exams. This conflict of interest leads to one common form of test score pollution called "scrubbing." Scrubbing exams involves changing the grade of an exam from failing to passing. In interviews with teachers, there have been several methods of scrubbing that have been uncovered. Teachers have mentioned that they have erased bubble sheets on regents exams, purposely reinterpreting rubrics while grading students' exams, and purposely lowered students' grades while grading the regents. A better definition of the term scrubbing along with gradations is elicited from teachers. Pressures from administrators, who currently receive incentive bonuses, to scrub are also discussed.

The issues surrounding the comparability of various tests used to assess performance in schools received broad public attention during congressional debate over the Voluntary National Tests proposed by President Clinton in his 1997 State of the Union Address. Proponents of Voluntary National Tests argue that there is no widely understood, challenging benchmark of individual student performance in 4th-grade reading and 8th-grade mathematics, thus the need for a new test. Opponents argue that a statistical linkage among tests already used by states and districts might provide the sort of comparability called for by the president's proposal. Public Law 105-78 requested that the National Research Council study whether an equivalency scale could be developed that would allow test scores from existing commercial tests and state assessments to be compared with each other and with the National Assessment of Education Progress. In this book, the committee reviewed research literature on the statistical and technical aspects of creating valid links between tests and how the content, use, and purposes of education testing in the United States influences the quality and meaning of those links. The book summarizes relevant prior linkage studies and presents a picture of the diversity of state testing programs. It also looks at the unique characteristics of the National Assessment of Educational Progress. *Uncommon Measures* provides an answer to the question posed by Congress in Public Law 105-78, suggests criteria for evaluating the quality of linkages, and calls for further research to determine the level of precision needed to make inferences about linked tests. In arriving at its conclusions, the committee acknowledged that ultimately policymakers and educators must take responsibility for determining the degree of imprecision they are willing to tolerate in testing and linking. This book

provides science-based information with which to make those decisions.

Students in public schools serving poor and working-class students are inundated by the effects of high-stakes examinations. Teachers are demoralized and students suffer substandard curricular and pedagogical experiences. These effects are articulated by students and teachers in the high school that provided the setting for the critical ethnography on which this text is based. Teachers resent being judged on the basis of students' performance on standardized assessments. They are deprofessionalized as their roles are oriented toward working-class norms. Students feel alienated by content that is meaningless and test-based pedagogies that are disempowering. While these findings are disturbing, critical theory provides a foundation for seeking hope. By incorporating inquiry and dialogue, this theoretical framework opens a space where resistance can be revealed and examined. In this case, the study exposed glimmers of resistance, spaces in the structure of schooling where students and teachers critique the system and suggest ways of subverting the negative effects of the neoliberal reforms through dialogic, empowering, culturally responsive pedagogies. Collective resistance, achieved through dialogic pedagogies that build on understandings of resistance and power, can cultivate theoretical and material spaces where a cycle of praxis can enhance possibilities for social justice. To that end, the conclusion is devoted to the implementation of critical, dialogic approaches to literacies, approaches intended to interrupt the hegemonic influences that perpetuate social reproduction by capitalizing on the potential for solidarity and collective agency among the students and teachers who populate and educate the working classes. This book would interest teacher educators, teachers, and school administrators.
