Code Name: Zeus is a story about immigrants from several countries coming together in a remote place in Texas to make their way as Americans. They left their grim existences in faraway parts of the world with no assurance they would find success and happiness. Kursk, TX and surrounding area, settled by German Russian immigrants in the early 20th century, suffered greatly from the dual impact of the Dust Bowl years and the Great Depression, only to be saved by two other newcomers from Europe who are great believers in capitalism and the American way of life. After making a vast fortune starting on the streets of New Orleans, Louisiana, and around Beaumont, Texas, Russian immigrant Robert Barzinsky and his junior partner, Jack Barnett, a native of Ireland, move to Kursk. They ranch, drill for oil, and create a secret project to prepare for a major worldwide disaster with help of several techies. Government agencies and sinister organizations in the United States and around the world closely follow the activities in and around the small town.

Edinburgh's historic New Town is one of the finest surviving examples of Georgian town planning. Even before work on the first phase of the New Town was completed, visitors were recording their very favourable impressions. An English tourist, Robert Heron, writing at the end of the 1790s, wrote that: "With regard to the buildings that have of late arisen in this City (Edinburgh) with such incredible rapidity, we may venture to say, that, in regularity and magnificence, they are scarcely equalled, or at least not excelled, by any in Europe...When Charlotte Square, at the west end of George Street, shall be completed, this City will certainly surpass, in regularity and magnificence, every other in Great Britain." Edinburgh's New Town was created thanks to the determination and vision of a group of leading citizens led by Lord Provost George Drummond. Having obtained the permission of Parliament to extend the city's royalty to the open fields beyond the Nor' Loch, (now Princes Street Gardens.) The City, very commendably, decided to organise a competition to design what even then was called The New Town. This competition was won in 1766 by a young 23 year old architect James Craig. His plan was a simple but very effective grid-iron design with three parallel streets running from east to west with a grand square at either end of the principal street which was to be named George Street after the King, George III. The foundation of the first house, which still stands, in Thistle Court, was laid in November 1767. Progress westwards though was slow. It was not until 1792 that work started on the houses of Charlotte Square at the west end of George Street. Although commercial development has spoiled much of Princes Street, the majority of Edinburgh's first New Town has sur-

vived the passage of time. It remains as one of the finest surviving examples of Georgian Town Planning and as such was recognised, along with the neighbouring Old Town, as a UNESCO World Heritage Site in 1995. 'A Walk Through Edinburgh's New Town' is intended both as a guide book for our many visitors and as an informative reference book for those, perhaps living far away as expatriate Scots, who have an interest in Edinburgh's unique story. Sharing your journey are some true Edinburgh 'local heroes' - George Drummond, six times elected as Lord Provost who was the driving inspiration behind the planned New Town, Sir James Young Simpson who discovered the anaesthetic properties of chloroform in his house in Queen Street, Sir Walter Scott who penned many of his famous 'Waverley Novels;' in the study of his home in Castle Street and Sir John Sinclair who masterminded the production of 'The Statistical Account of Scotland' , a unique survey of the Scotland of the 1790s, from his home in Charlotte Square. You will also meet some colourful eccentrics including the self-styled Sobieski brothers who claimed to be the grandsons of Bonnie Prince Charlie and Hugo Arnot, the asthmatic lawyer, whose 'History of Edinburgh', published in 1779, gives us an invaluable account of the dramatic changes taking place in the city in the second half of the 18th century. From its early days, the New Town attracted famous visitors including Charles Dickens, Queen Victoria, Vincent Lunardi, the balloonist and George IV who made what was arguably the first modern royal visit, planned by Sir Walter Scott, in August 1822. 'A Walk Through Edinburgh's New Town' draws from several contemporary sources in describing such events as the visit of George IV, the financial troubles of Sir Walter Scott and the creation of the Earthen Mound. The book is generously illustrated with pictures of the New Town as we can enjoy it today as well as contemporary prints and drawings. The book concludes with a bibliography and some suggestions for further reading. If you enjoy this book then why not continue your journey by purchasing the companion title 'A Walk Down Edinburgh's Royal Mile.'

The Football World Cup is one of the biggest global sporting events. Along with the Summer Olympic Games, the Football World Cup can be truly called a mega-sport event. Both events attract billions of dollars in broadcast and sponsorship contracts and millions of spectators every four years when the events are staged. Nations and cities around the world desperately seek to host both events. By doing so host nations and cities often justify the multi-billion dollar investment required to stage these events on economic development grounds with stated benefits to emerge from urban renewal, transport infrastructure and tourism development. Given the size of the Football World Cup and its economic impact it is surprising that this book is the first attempt to bring leading international mega-sport event researchers together to examine the management and organizational components of the event. *Managing the Football World Cup* follows in the same path as the editors' previous publication, *Managing the Olympics*, in exploring areas often overlooked by project management and business studies researchers. Therefore considering the global impact of the Football World Cup it is time for a detailed examination of the planning, organization, management, implementation and related commercial features of this mega-sport event.

From the resumption of automobile production at the close of World War II through the 1950s, the American auto industry would see the births and deaths of several manufacturers, great technological advances, and an era of dramatic styling as a prospering nation asserted its growing mobility. Cars of this period are among the most iconic vehicles ever built in the United States: the 1949 Ford, the remarkable Studebaker designs of 1950 and 1953, the 1955-1957 Chevrolets, the "Forward Look" Chrysler products, the ill-fated Edsel and many others. This comprehensive reference book details every model from each of the major manufacturers (including independents such as Kaiser-Frazer and Crosley but excluding very low-volume marques such as Tucker) from model years 1946 through 1959. Year by year, it provides an overview of the industry and market, followed by an individual report on each company: its main news for the year (introductions or cancellations of models, new engines and transmissions, advertising themes, sales trends etc.); its production figures and market status; and its powertrain offerings, paint colors and major options. The company's models are then de-

tailed individually with such information as body styles, prices, dimensions and weights, standard equipment and production figures. Nearly 1,000 photographs are included.

Provides information about components, including batteries, capacitors, diodes, and switches.

Looks at concept and production automobiles launched worldwide each year.

How could one company—General Motors—meet disaster on one continent and achieve explosive growth on another at the very same time? While General Motors was hurtling towards bankruptcy in 2009, GM's subsidiary in China was setting new sales and profit records. This book reveals how extraordinary people, remarkable decisions and surprising breaks made triumph in China possible for General Motors. It also shows just how vulnerable that winning track record remains. No small part of GM's success in China springs from its management of shifting business and political relationships. In China, the government makes the rules for—and competes in—the auto industry. GM's business partner, the City of Shanghai, is both an ally and a competitor. How does such an unnatural relationship work on a day-to-day basis? Where will it go on the future? General Motors also engages in constant battles with other global and Chinese car makers for the hearts of demanding Chinese consumers. Dunne gives us rare glimpses into the mindsets and behavior of this new moneyed set, the worlds newest class of wealthy consumers. China is already the number one car market in the world. During the next ten years, China will export millions of cars and trucks globally, includ-

ing to the United States. American Wheels, Chinese Roads presents readers with fascinating illustrations of what to expect when Chinese cars, companies, and business people arrive on our shores.

Make Conflict Your Partner for Positive Change! Clinical psychologist and transformative communication expert Dr. Nate Regier believes that the biggest energy crisis facing our world is the misuse of conflict. Most organizations are terrified of conflict, seeing it as a sign of trouble. But conflict isn't the problem, says Regier. It's all about how we use the energy. When people misuse conflict energy, it becomes drama: they struggle against themselves or each other to feel justified about their negative behavior. The cost to companies, teams, and relationships is staggering. The alternative, says Regier, is compassionate accountability: struggling with others through conflict. Discover the Compassion Cycle, an elegant model for balancing empathy, care, and transparency with boundaries, goals, and standards. Provocative, illuminating, and highly practical, this book helps us avoid the casualties of conflict through openness, resourcefulness, and persistence.

"This pioneering study of United States direct investment in Japan will interest academic specialists, business managers, and government policymakers in America, Japan, and elsewhere. Drawing on rich historical materials from both sides of the Pacific, including corporate records and government documents never before made public, Mason examines the development of both Japanese policy towards foreign investment and the strategic responses of American corporations. This history is related in part through original case studies of Coca-Cola, Dow Chemical, Ford, General Motors, International Business Machines, Motorola, Otis Elevator, Texas Instruments, Western Electric, and Victor Talking Machine. The book seeks to explain why so little foreign direct investment has entered modern Japan. In contrast to the widely held view that emphasizes an alleged lack of effort on the part of foreign corporations, this study finds that Japanese restrictions merit greater attention. Many analysts of the modern Japanese political economy identify the Japanese government as the key actor in initiating such restrictions. Mason finds that the influence

of Japanese business has often proved more potent than these analysts suggest. This book offers fresh insights into both the operation of the modern Japanese political economy and of its relations with the world economy."
