An integrative approach to healing chronic autoimmune conditions by a doctor, researcher, and sufferer of progressive multiple sclerosis (MS) whose TEDx talk is already a web sensation Like many physicians, Dr. Terry Wahls focused on treating her patients' ailments with drugs or surgical procedures—until she was diagnosed with multiple sclerosis (MS) in 2000. Within three years, her back and stomach muscles had weakened to the point where she needed a tilt-recline wheelchair. Conventional medical treatments were failing her, and she feared that she would be bedridden for the rest of her life. Dr. Wahls began studying the latest research on autoimmune disease and brain biology, and decided to get her vitamins, minerals, antioxidants, and essential fatty acids from the food she ate rather than pills and supplements. Dr. Wahl's adopted the nutrient-rich paleo diet, gradually refining and integrating it into a regimen of neuromuscular stimulation. First, she walked slowly, then steadily, and then she biked eighteen miles in a single day. In November 2011, Dr. Wahls shared her remarkable recovery in a TEDx talk that immediately went viral. Now, in The Wahls Protocol, she shares the details of the protocol that allowed her to reverse many of her symptoms, get back to her life, and embark on a new mission: to share the Wahls Protocol with others suffering from the ravages of multiple sclerosis and other autoimmune conditions.

A watershed is the area of land from which precipitation or surface water flow is drained into a receiving water body. The term is roughly analogous to a "drainage basin", and are often used interchangeably. While primarily describing the geologic/geographic drainage patterns of water, a more holis-

tic view of the word watershed incorporates all the biotic and abiotic communities and processes contained in the drainage basin. Watersheds may be referred to as the sum of the area, drainage patterns, and environment of a given waterway or waterway segment. This book reviews research on watersheds including the climatic change impacts on the hydrologic dynamics of watershed systems; the watershed approach for resource conservation, environment quality and food security in the Indian Himalayas and others.

Our society is struggling with what Pope Benedict has called "profound crisis of faith that has affected many people." In response, the Holy Father has called us all to a Year of Faith from October 2012 to November 2013. We see the signs all around us: the demand for science to prove everything before we can believe it, the role of media and celebrities who deny the existence of God and denounce the role of the Church, and the ease in which we can all isolate God and faith into only one part of our life. In a follow-up to his best selling *St. Paul Bible Study for Catholics* during the year of St. Paul, Fr. Mitch Pacwa once again leads Catholics to a deeper understanding of Pope Benedict's call to action for the year. Perfect for individual or group study, this book is a wonderful guide to experiencing a conversion, growing in faith, and following Jesus Christ more closely. It shows us how to integrate every component of our life - relationships, morality, work, recreation, and all - into a meaningful whole. Make the most of Pope Benedict's Year of Faith, walking hand in hand with Fr. Pacwa as he guides you through the beauty and insights of Scripture in relationship to your everyday life.

Country lanes and covered bridges, old stone walls and the brilliant colors of autumn...northern New England offers untold treasures to the byway traveler.

As in the days following Skylab, solar physics came to the end of an era when the Solar Maximum Mission re-entered the earth's atmosphere in December 1989. The 1980s had been a pioneering decade not only in space- and ground-based studies of the solar atmosphere (Solar Maximum Mission, Hinotori, VLA, Big Bear, Nancay, etc.) but also in solar-terrestrial relations (ISEE, AMPTE), and solar interior neutrino and helioseismology studies. The pace of development in related areas of theory (nuclear, atomic, MHD, beam-plasma) has been equally impressive. All of these raised tantalizing further questions about the structure and dynamics of the Sun as the prototypical and best observed star. This Advanced Study Institute was timed at a pivotal point between that decade and the realisation of Yohkoh, Ulysses, SOHO, GRANAT, Coronas, and new ground-based optical facilities such as LEST and GONG, so as to teach and inspire the up and coming young solar researchers of the 1990s. The topics, lecturers, and students were all chosen with this goal in mind, and the result seems to have been highly successful by all reports.

During the 1980s, widespread dissatisfaction with America's schools gave rise to a powerful movement for educational change, and the nation's political institutions responded with aggressive reforms. Chubb and Moe argue that these reforms are destined to fail because they do not get to the root of the problem. The fundamental causes of poor academic performance, they claim, are not to be found in the schools, but rather in the institutions of direct democratic control by which the schools have traditionally been governed. Reformers fail to solve the problem-when the institutions ARE the problem. The authors recommend a new system of public education, built around parent-student choice and school competition, that would promote school autonomy—thus providing a firm foundation for genuine school improvement and superior student achievement.
