In April 1997, United States Secretary of Defense William Cohen declared that there are terrorists at work who "... are engaging even in an eco-type of terrorism whereby they can alter the climate, set off earthquakes, volcanoes remotely through the use of electromagnetic waves..." Weather modification in the form of cloud seeding to increase snow packs in the Sierras or suppress hail over Kansas is now an everyday affair. Hundreds of environmental and weather modifying technologies have been patented in the United States alone-and hundreds more are being developed in civilian, academic, military and quasi-military laboratories around the world at this moment! This book lays bare the grim facts of who is doing it and why. The earth and the sky have themselves been turned into weapons! Underground nuclear tests in Nevada have set off earthquakes. A Russian company has been offering to sell typhoons on demand since the 1990s. Scientists have been searching for ways to move hurricanes for over 50 years-the same timeframe that took us from the Wright Brothers to Neil Armstrong. In this book, Jerry E. Smith picks up where his 1998 book about the High-frequency Active Auroral Research Program (HAARP) left off. He reports on recent developments at HAARP, including its possible connection to the crash of the Space Shuttle Columbia and what role, if any, it played in certain "natural" disasters, like Hurricane Katrina. Tackling the chem-trail controversy, Smith examines claims that particles called aerosols are being deliberately injected into the atmosphere. Edward Teller, father of the hydrogen bomb, proposed putting up a "sun screen" of aerosols to save the earth from global warming-is someone actually doing it? Numerous ongoing military programs do inject aerosols at high altitude for communications and surveillance operations. Could these include mind control or population control applications? Smith puts these technologies into context by examining the geopolitical conflicts that are driving their development from Globalization to the rise of Neo-Con Neo-Fascism.

Easy-to-implement classroom lessons from the world's premier educational system. Finland shocked the world when its fifteen-year-olds scored highest on the first Programme for International Student Assessment (PISA), a set of tests touted for evaluating critical-thinking skills in math, science, and reading. That was in 2001; but even today, this tiny Nordic nation continues to amaze. How does Finnish education—with short school days, light homework loads, and little standardized testing—produce students who match the PISA scores of high-powered, stressed-out kids in Asia? When Timothy D. Walker started teaching fifth graders at a Helsinki public school, he began a search for the secrets behind the successes of Finland's schools. Walker wrote about several of those discoveries, and his Atlantic articles on this subject became hot topics of conversation. Here, he gathers all he learned and reveals how any teacher can implement many of Finland's best practices. Remarkably, Finland is prioritizing the joy of learning in its newest core curricula and Walker carefully highlights specific strategies that support joyful K-12 classrooms and integrate seamlessly with educational standards in the United States. From incorporating brain breaks to offering a peaceful learning environment, this book pulls back the curtain on the joyful teaching practices of the world's most lauded school system. His message is simple but profound: these Finland-inspired strategies can be used in the U.S. and other countries. No educator—or parent of a school-aged child—will want to miss out on the message of joy and change conveyed in this book.

This book offers an up-to-date overview of the research on philosophy of mathematics education, one of the most important and relevant areas of theory. The contributions analyse, question, challenge, and critique the claims of mathematics education practice, policy, theory and research, offering ways forward for new and better solutions. The book poses basic questions, including: What are our aims of teaching and learning mathematics? What is mathematics anyway? How is mathematics related to society in the 21st century? How do students learn mathematics? What have we learnt about mathematics teaching? Applied philosophy can help to answer these and other fundamental questions, and only through an in-depth analysis can the practice of the teaching and learning of mathematics be improved. The book addresses important themes, such as critical mathematical education, the traditional role of mathematics in schools during the current unprecedented political, social, and environmental crises, and the way in which the teaching and learning of mathematics can better serve social justice and make the world a better place for the future.

Volume I of the thirty-eight volume translation of Tabari's great History begins with the creation of the world and ends with the time of Noah and the Flood. It not only brings a vast amount of speculation about the early history of mankind into sharp Muslim focus, but it also synchronizes ancient Iranian ideas about the prehistory of mankind with those inspired by the Qur'an and the Bible. The volume is thus an excellent guide to the cosmological views of many of Tabari's contemporaries. The translator, Franz Rosenthal, one of the world's foremost scholars of Arabic, has also written an extensive introduction to the volume that presents all the facts known about Tabari's personal and professional life. Professor Rosenthal's meticulous and original scholarship has yielded a valuable bibliography and chronology of Tabari's writings, both those preserved in manuscript and those alluded to by other authors. The introduction and first volume of the translation of the History form a ground-breaking contribution to Islamic historiography in English and will prove to be an invaluable source of information for those who are interested in Middle Eastern history but are unable to read the basic works in Arabic.

Much has been written about the work of William Blake and some of the religious beliefs that influenced him, but there is a secret history which, until now, has been kept deep beneath the surface in the mystical underground of England in the eighteenth-century. Here, leading Blake scholar Marsha Keith Schuchard reveals an altogether more intriguing and controversial picture of the poet and artist. The discovery of Blake family documents took Schuchard on a journey of detection that led her to a cast of radical characters including Cagliostro, Zinzendorf and the mystic Swedenborg, and to a world of waking visions, sexual-spiritual experimentation, kabbalistic magic, tantric sex and free love. Why Mrs Blake Cried offers a new insight into the work of Blake and takes us on an extraordinary journey through secret societies and ancient rituals.

Sophie Mercer thought she was a witch. That was the whole reason she was sent to Hex Hall, a reform school for delinquent Prodigium (aka witches, shapeshifters, and fairies). But that was before she discovered the family secret, and that her hot crush, Archer Cross, is an agent for The Eye, a group bent on wiping Prodigium off the face of the earth.

For Maya, history is like a dream, and her dreams are like a history of her life and how it relates to others. Effortlessly defying and calling into question time and space, Maya inhabits fantastical realities filled with shamans, romantic longing, a daughter's struggles, and a flying dragon. Lyrically flowing between Maya's multiple realities, *The Original Dream* is the story of a young independent Indonesian woman trying to break free from cultural and social conventions while also searching for her place among family and friends. With guidance from her parents, coworkers, and sister, along with a newborn filled with the wisdom of elders, Maya navigates her perceptions, looking for answers to unknown questions. Whether soaring through the nighttime sky, caring for her nephew, or tending to guests at the hotel where she works, she tries to delineate the difference between dreams and reality and if such a difference even matters. "

Popular and multimodal forms of cultural products are becoming increasingly visible within translation studies research. Interest in translation and music, however, has so far been relatively limited, mainly because translation of musical material has been considered somewhat outside the limits of translation studies, as traditionally conceived. Difficulties associated with issues such as the 'musicality' of lyrics, the fuzzy boundaries between translation, adaptation and rewriting, and the pervasiveness of covert or unacknowledged translations of musical elements in a variety of settings have generally limited the research in this area to overt and canonized translations such as those done for the opera. Yet the intersection of translation and music can be a fascinating field to explore, and one which can enrich our understanding of what translation is and how it relates to other forms of expression. This special issue is an attempt to open up the field of translation and music to a wider audience within translation studies, and to an extent, within musicology and cultural studies. The volume includes contributions from a wide range of musical genres and languages: from those that investigate translation and code-switching in North African rap and rai, and the intertextual and intersemiotic translations revolving around Mahler's lieder in Chinese, to the appropriation and after-life of Kurdish folk songs in Turkish, and the emergence of rock'n roll in Russian. Other papers examine the reception of Anglo-American stage musicals and musical films in Italy and Spain, the concept of 'singability' with examples from Scandinavian languages, and the French dubbing of musical episodes of TV series. The volume also offers an annotated bibliography on opera translation and a general bibliography on translation and music.

THE INTERNATIONAL BESTSELLER The complete history of the world, from the beginning of time to the present day, based on the beliefs and writings of the secret societies. Having studied theology and learnt from initiates of all the great secret societies of the world, Jonathan Black has learned that it is possible to reach an altered state of consciousness in which we can see things about the way the world works that hidden from our everyday commonsensical consciousness. This history shows that by using secret techniques, people such as Leonardo da Vinci, Isaac Newton and George Washington have worked themselves into this altered state - and have been able to access supernatural levels of intelligence. This book will leave you questioning every aspect of your life and spotting hidden messages in the very fabric of society and in life itself. This book attempts to understand an ancient people in terms of modern evolutionary biology. A basic idea is that Judaism is a group evolutionary strategy-what one might term an evolutionarily significant way for a group of people to get on in the world. The book documents several theoretically interesting aspects of group evolutionary strategies using Judaism as a case study. These topics include the theory of group evolutionary strategies, the genetic cohesion of Judaism, how Jews managed to erect and enforce barriers to gene flow between themselves and other peoples, resource competition between Jews and non-Jews, how Jews managed to have a high level of charity within their communities and at the same time prevented free-riding, how some groups of Jews came to have such high IQ's, and how Judaism developed in antiquity. This book was originally published in 1994 by Praeger Publishers. The Writers Club edition contains a new preface, Diaspora Peoples, describing several interesting group evolutionary strategies: The Gypsies, the Hutterites and Amish, the Calvinists and Puritans, and the Overseas Chinese.

We live in a world populated not just by individuals but by figures, those larger-than-life people who in some way express and challenge our conventional understandings of social types. This innovative and collaborative work takes up the wide range of figures that populate the social and cultural imaginaries of contemporary Southeast Asia—some familiar only in specific places, others recognizable across the region and even globally. It puts forward a series of ethnographic portraits of figures that represent and give voice to something larger than themselves, offering a view into social life that is at once highly particular and general. They include the Muslim Television Preacher in Indonesia, Miss Beer Lao, the Rural DJ in Thailand, the Korean Soap Opera Junkie in Burma, the Filipino Seaman, and the Photo Retoucher in Vietnam. *Figures of Southeast Asian Modernity* brings together the fieldwork of over eighty scholars and covers the nine major countries of the region: Burma (Myanmar), Cambodia, Indonesia, Laos, Malaysia, the Philippines, Singapore, Thailand, and Vietnam. An introduction outlines important social transformations in Southeast Asia and key theoretical and methodological innovations that result from ethnographic attention to the study of key figures. Each section begins with an introduction by a country editor followed by short essays offering vivid and intimate portraits set against the background of contemporary Southeast Asia. The re-

sult is a volume that combines scholarly rigor with a meaningful, up-to-date portrayal of a region of the world undergoing rapid change. A reference bibliography offers suggestions for further reading. *Figures of Southeast Asia Modernity* is an ideal teaching tool for introductory classes to Southeast Asia studies, anthropology, and geography.

The Map is a practical guidebook introducing the basics of research in translation studies for students doing their first major research project in the field. Depending on where they are studying, this may be at advanced undergraduate (BA) or at postgraduate (MA/PHD) level. The book consists of ten chapters. Chapter 1 offers an overview of 12 research areas in translation studies in order to help students identify a topic and establish some of the current research questions relating to it. Chapter 2 is designed to assist students in planning their research project and covers topics such as refining the initial idea, determining the scope of the project, checking out resources, reading critically, keeping complete bibliographic records, and working with a supervisor. Chapters 3 to 7 provide some of the conceptual and methodological tools needed in this area of research, with detailed discussion of such topics as theoretical models of translation, types of research, asking questions, making claims, formulating hypotheses, establishing relations between variables, and selecting and analyzing data. Chapters 8 and 9 are about presenting one's research, in writing as well as orally. Finally, chapter 10 deals with some of the criteria commonly used in research assessment, especially in the assessment of theses. The authors provide detailed guidance on further reading throughout. This is an essential reference work for research students and lecturers involved in supervising research projects and degrees.
