Maternal and Child Health: Global Challenges, Programs ...
With 210 million women becoming pregnant and the delivery of 140 million newborn babies each year, it is urgent to improve the quality of care and reduce disparities in access, thereby securing future economic and social development and supporting the vision of the 2030 Sustainable Development Goals (SDGs) and the Global Strategy for Women's, Children's, and Adolescents' Health.

Maternal and child health (MCH) is the public health discipline which deals with the promotion and protection of the health of women, child, adolescents, and their families and communities. Today, a significant percentage of the activities undertaken by international development agencies and professionals remain focused on the protection and improvement of the health and wellbeing of women, children, and families.

WHO | Maternal and reproductive health

Global Maternal and Child Health: Medical, Anthropological, and Public Health Perspectives is unique in combining the opinions and expertise of public health specialists, physicians, anthropologists and social scientists, epidemiologists, nurses, midwives, and representatives of governmental and non governmental agencies to comprehensively explore the increasing challenges and potential solutions to global maternal and child health issues.

Maternal, Newborn and Child Health The World Health Organisation estimates that 800 women die every day due to complications in pregnancy or childbirth, 99% of these deaths occurring in low-income countries. The most common causes of maternal mortality are obstetric haemorrhage, sepsis and pregnancy associated hypertension.

Maternal And Child Health Global

Significant progress has been made in improving maternal and child health globally, in part due to increased U.S. leadership and support. Since 1990, the annual number of child and maternal deaths has been more than halved.

Maternal and newborn health UNICEF and partners help save the lives of mothers, newborns and children by supporting high-quality, low-cost care and services before, during and after birth - at health facilities and at home. We also work towards the final elimination of maternal and newborn tetanus across the globe.

Maternal, Child and Reproductive Health - ISGLOBAL

Maternal and reproductive health. Maternal mortality: Every day in 2017, about 808 women died due to complications of pregnancy and child birth. Almost all of these deaths occurred in low-resource settings, and most could have been prevented. The primary causes of death are haemorrhage, hypertension, infections, and indirect causes, mostly due to interaction between pre-existing medical conditions and pregnancy.

Maternal and Child Health - Global Health Briefing Book 2019

Maternal, neonatal and child health | UNICEF Sierra Leone
Despite global progress, huge inequities remain in maternal, newborn, and child health. The world already possesses the

evidence-based interventions we need to close the gaps in health outcomes—oxytocin for postpartum hemorrhage, 7.1% chlorhexidine for umbilical cord care, kangaroo mother care for small infants (pictured), amoxicillin dispersible tablets for childhood pneumonia, and more.

Mapping the road to equity in maternal, newborn, and child ... USAID is a global leader in maternal and child health, and partners with governments to meet the health needs of their women and children. USAID's Acting on the Call reports present a roadmap with country-specific plans and updates on progress to address these needs.

Maternal, Newborn & Child Health - Bill & Melinda Gates ...

Maternal, newborn and child survival | UNICEF

The health of women and children is vital to creating a healthy world. Despite great progress, there are still too many mothers and children dying—mostly from causes that could have been prevented. Every day, approximately 800 women die from preventable causes related to pregnancy and childbirth. 99% of these deaths occur in developing countries.

This initiative supports the global efforts to ensure that all women and children, regardless of where they live or are born, have access to quality health care services. Share Despite remarkable global progress, the most essential maternal and reproductive health interventions still do not reach the poorest and most vulnerable women, girls and children in the developing world.

The maternal mortality rate in Sierra Leone is the highest in the world with 1,360 mothers dying in every 100,000 live births. The mortality rates of neonates, infants and children under five are also amongst the highest globally at 34, 82, and 111 deaths per 1,000 live births, respectively.

Methods We modelled three scenarios in which the coverage of essential maternal and child health interventions is reduced by 9·8–51·9% and the prevalence of wasting is increased by 10–50%.
