Ruth Drew, director of information and support services for the Alzheimer's Association, says "music therapy is the use of music to help address physical, emotional, behavioral and social needs of an individual. For people living with dementia, music can allow for self-expression and engagement."

How Music Therapy Could Help People With Dementia : NPR

MHA is a leading provider of music therapy in dementia care. Music therapy helps to alleviate isolation and the symptoms for those living with dementia by helping to unlock special memories and express emotions and feelings that other forms of communication cannot, even if the individual is no longer able to speak or respond to other people's words.

The target population is the families and/or carers of people with dementia who have received/receiving music therapy as a treatment and to hear their opinions, thoughts and feelings on the effects that music therapy has on that individual through the method of a focus group.

Music activates the logical and creative areas of the brain, providing people with dementia with opportunities for cognitive and memory stimulation, emotional expression, movement and speech. Music Therapy is proven to be effective even for people who have not responded or are resistant to other treatment approaches.
