How to Help Your Teen Struggling With Mental Health Issues

Mental illnesses like depression, anxiety and bipolar disorder affect thousands of teens across the country every year. These statistics point to their prevalence — and the need for compassionate counsel and care from loved ones. Each year in America, 1 in 5 teens aged 13-18 experience a mental health condition.

Psychotherapy for Children and Adolescents: Different Types

The emotional storm of adolescence, stemming from both developmental and psychopathological sources, leaves many adolescents in need of psychotherapy. Many adolescents in need of therapy resist long-term attachment and involvement in an ambiguous relationship, which they experience as a threat to their emerging sense of independence and separateness.

Psychotherapy refers to a variety of techniques and methods used to help children and adolescents who are experiencing difficulties with their emotions or behavior. Although there are different types of psychotherapy, each relies on communications as the basic tool for bringing about change in a person's feelings and behaviors.
