The Trace elements Are bioelements present in all living beings, being chemical elements that can be found in almost any living particle. Within living beings they remain in balance, and both their

absence and their excess, can cause problems in the organism to become pathological.

This chapter is a summary of the role of the following essential trace elements in the etiology and prevention of chronic diseases: iron, zinc, fluoride, selenium, copper, chromium, iodine, manganese, and molybdenum.

The 15th International Symposium on Trace Elements in Man and Animals (TEMA 15) will be inclusive for the trace element community as presentations will include reports of research on humans, animals, cells and molecules both basic and applied.
